

CONVERSION TABLE FOR S, R and K-type THERMOCOUPLE

Table des matières – Table of contents

How this table works	3
S-TYPE THERMOCOUPLE	4
S-type : 0°C – 480°C.....	5
S-type : 490°C - 970°C.....	6
S-type: 980°C – 1460°C.....	7
S-type: 1470°C – 1760°C.....	8
R-TYPE THERMOCOUPLE	9
R-type: 0°C – 480°C	10
R-type: 490°C – 970°C	11
R-type: 980°C – 1460°C	12
R-type: 1470°C – 1760°C	13
K-TYPE THERMOCOUPLE	14
K-type: 0°C – 480°C	15
K-type: 490°C – 970°C	16
K-type: 980°C – 1370°C	17

How this table works

R-type Thermocouple

- Ambient air temperature is 25°C.
- The table tells us that 25°C correspond to 0.14mV for a R-type Thermocouple (see page 10)
- Measured value (with a standard voltmeter) at the 2 thermocouple wires is 8.5mV

You now have to add up the MV obtained by the voltmeter to those of the ambient temperature.

$$8.5 \text{ mV} + 0.14 \text{ mV} = \mathbf{8.64 \text{ mV}}$$
 (page 11)

Temperature inside the furnace is 856°C(=8.64mV) (page11)

Thermocouple du type R:

- La température ambiante est de 25°C.
- La table du thermocouple de type R indique que 25°C correspond à 0.14 mV (en rouge à la page 10)
- La valeur mesurée (avec un voltmètre) à la sortie des 2 fils du thermocouple inséré dans le four indique une valeur de 8.5 mV.

Il faut additionner les 8.5mV obtenu par le voltmètre à ceux de la température ambiante, 0.14mV soit :

$$8.5 \text{ mV} + 0.14 \text{ mV} = \mathbf{8.64 \text{ mV}}$$
 (page 11)

La température à l'intérieure du four est donc de 856°C(=8.64mV) (page11)

S-TYPE THERMOCOUPLE

THERMOCOUPLE DE TYPE S

S-type : 0°C – 480°C
